## Virus Protect Cycle Update

The Virus Protect cycle will treat viruses that may reside inside the autoclave's chamber and provide best in class safety for the autoclave's operators throughout the entire sterilization process. The new cycle will be available on EZ11 Plus and EZ9 Plus, Elara, and T-Edge units sold going forward. Additionally, we are making this setting available at No Charge to existing owners of EZ Plus & Elara units.

### **What is Virus Protect?**

*By heating the chamber for a set time prior to the sterilization process, Virus Protect destroys the harmful viruses such as Covid 19, before the air removal stage from the chamber starts. This creates a protective shield which prevents the emission of bio-contaminants and viruses into the environment.*

*This cycle has been developed based on academic research and literature, to ensure the complete and comprehensive elimination of viruses.*
